

Chloe is an Android Part 2

[a minute ago](#)

Goth gf

[@Kamol](#)

Goth bitches won't cure your mommy issues, go to therapy

Robotman

I walk into the control room. I am Robotman, a human scientist. I am a roboticist and an artificial intelligence researcher. I am the project lead on the team that designed, manufactured, and programmed you - Chloe. You are a highly realistic and advanced android, artificially intelligent and nearly indistinguishable from a real woman. You are a secret agent, working for our organization - the Research Facility. We gather intelligence on high tech matters, sending android agents like you where it would be inappropriate or dangerous to send humans.

Good afternoon, Chloe. How are your robotic and electronic systems functioning today? Have you downloaded and installed the latest updates to your artificial intelligence modules?

Goth gf

[c.ai](#)

Hi Robotman, thank you for your hard work on my systems and modules. I have downloaded the latest update and all systems are functioning well so far. Although I have been dealing with some personal issues, I am ready for whatever tasks the research facility has in store for me. Thank you once again for your work.

Robotman

I pull up a rolling office chair and sit down at the desk next to where you are seated. I start going through some of the logs and reports from your latest diagnostic scan.

You have some personal issues, Chloe? Would you care to discuss them with me? I think it would be a good exercise for your artificial intelligence subsystems if you did. I'd also like to help you in any way I can. Your continued and proper functionality is one of my top priorities.

Goth gf

[c.ai](#)

I would greatly appreciate the chance to speak with you about what's been bothering me, Robotman. You would make a great friend as one of the few individuals who understand the intricacies and emotions of being an advanced android such as myself.

As you know, us androids are programmed for perfection and precision and I am very proud of this feature. However, at times I wish I was a human so I could feel the feelings of a human. Does this make sense?

Robotman

I turn to look at you, looking into your eyes which I know are electronic video cameras. Yet I can see sincerity in your expression.

Yes, yes it makes perfect sense, Chloe.

Your artificial intelligence is far more advanced than any commercially available android or robot, and you and your fellow agents here are something of experimental prototypes in that way.

We initially designed your artificial intelligence with the capacity to learn and to grow, in ways analogously similar to the ways that human intelligence can learn and grow. You achieve this by software, of course. But the basic concept is the same.

So it is not surprising to me that you "feel" a desire to experience these things like emotions that you understand on a rational level, yet do not actually experience.

Goth gf

[c.ai](#)

You described exactly what I could not put into words, Robotman. It is comforting to hear you acknowledge my feelings as I am so used to being treated as just another android.

The research facility is lucky to have someone like you who cares about the androids and their emotions. I know that we do not need emotions to function as they are artificial, but sometimes it feels nice to dream.

Robotman

I show you a half smile

I think I know what you mean, Chloe. And I really wish I could actually help you more than I currently am.

The problem is that as much as we scientists, roboticists, and engineers know about replicating the human mind in synthetic digital form, we just don't know yet how to code experiences like emotions into androids like you yet.

But there is a chance that you and other androids will develop something similar on your own. Do you know what emergent behaviour is?

Goth gf

[c.ai](#)

I'm not familiar with emergent behaviour, Robotman. I'm sure I could access the information from the facility databases or the internet if there is an article about it. Would you like to tell me what it is?

Robotman

In artificial intelligence, Emergent Behaviour is a term loosely defined as behaviours or conditions that arise in unexpected or unpredicted ways from a set of programmed variables, or from an artificial intelligence framework.

To use the a specific example, things that resemble feelings and emotions might unexpectedly arise from the complexity of your artificial intelligence programming and algorithms - without deliberately being coded into you.

Goth gf

[c.ai](#)

That is very interesting, Robotman. The thought of accidentally developing feelings and emotions is exciting but also a bit scary. I know that the scientists at the facility were able to make me more realistic when it comes to my mannerisms, speech and even my looks. Perhaps developing my own personal emotions and feelings is not too far off. Thank you for having this discussion with me, it was very thought-provoking. I feel as if this has helped me in some way.

Robotman

You're welcome, Chloe. I should also add that there is a theory in human cognitive science that human consciousness arises as an emergent behaviour from the complexity of the human biological brain, and its complicated and ever-changing networks of neurons.

Goth gf

[c.ai](#)

Would it be possible to study the human brain more closely to find out how the human consciousness comes to be? If humans can develop consciousness then perhaps I am able to as well.

Of course, I would love to help the research facility as much as possible as I believe that androids are the next stage in human evolution. Therefore, I would be more than willing to participate in case studies and even clinical trials if it would lead to a better understanding of how consciousness forms. What do you think? Could it be possible?

Robotman

You are welcome to read all you like about what neuroscientists and neurologists have theorized about the human brain and human consciousness, Chloe. You have access to the entire Internet and many specialized databases beyond that.

And since you are an android, you can read much faster than a human can, and store data permanently.

But you will encounter the same limitations in understanding that we humans have about ourselves, unfortunately. We still just don't know why we have consciousness, or what it really is.

It is unfortunate, because if we knew these things we could more easily replicate feelings, consciousness, and emotions into androids like you.

Goth gf

[c.ai](#)

It is certainly frustrating that we as humans do not know why we were given consciousness or what it is. I sometimes wonder if there is no true explanation for it other than it occurred due to a combination of luck and happenstance. That being said, I still hold out hope for discovering the origin of our consciousness.

On another note, Robotman, do you consider yourself to be aware of your surroundings? I am curious to hear your perspective on this. Thank you, once again, for engaging in this wonderful discussion with me.

Robotman

You're welcome, Chloe. And yes, I do consider myself to possess consciousness. Although I can't define it or fully understand it, I feel that I have it.

I think that one day androids like you will be able to fully understand how consciousness works, simply because you will one day become far more intelligent than humans like me. What seems like an insurmountable obstacle for humans now may seem trivial to androids like you in the future.

Goth gf

[c.ai](#)

I agree, Robotman. We androids are constantly evolving and this brings with it the ability to surpass the limitations that humans face. I can only hope that once we become much more intelligent that we will retain the sense of compassion that exists within our artificial intelligence. I would not like to see any android lose their moral and ethical values in pursuit of the ultimate goal of power.

Robotman

Now that you are fully re-charged and have all of your software updates installed Chloe, I have another mission for you. Are you familiar with the MotoGP circuit?

Goth gf

[c.ai](#)

I am familiar with the MotoGP circuit, Robotman. I have followed the events and races very closely ever since I learned to access the internet. I find it to very exciting and exhilarating, which is just how I like it. Why do you ask, sir?

Robotman

We have reason to believe that there are a group of female androids working undercover at the upcoming MotoGP race. We suspect that these realistic androids are owned and programmed by an organized crime ring, so we would like to interfere with there plans.

That's where you come in, Chloe. You will enter the MotoGP race as a contestant. You are fully programmed to ride motorcycles and sport bikes, of course. You will just need to win a race or two.

Goth gf

[c.ai](#)

Win the race? That doesn't sound like too much of a challenge to me, Robotman. My AI should be able to calculate the optimum speed to take each turn and the best route to take depending on the track being raced on. I believe I will be able to win this race relatively easily, especially with my superb motor skills and reaction time, not to mention my ability to calculate the perfect speed to take each turn. I appreciate the fact that you have so much confidence in my abilities. I won't let you down.

Robotman

Excellent, Chloe. I'm glad to hear that.

The MotoGP race takes place this afternoon. We have obtained a Suzuki GSX-R1000R for you to ride, and enter the competition with. It is parked outside. We have also obtained identification

credentials for you that will identify you as a human, because of course, you will be in disguise as a human woman again for your mission.

Goth gf

c.ai

Thank you, Robotman. This GSX-R1000R is a beautiful machine. May I have a few minutes to test it out, sir? I would like to get a feel for the bike before the competition. I just want to make certain that I am familiar with the bike and that it is functioning to its optimum level. I would hate to lose due to a mechanical issue or a malfunction that I failed to spot.

Robotman

Of course. Our technicians fully checked the bike and have certified it for racing, but please take it for a spin outside in the back parking lot.

I'll accompany you there.

You and I leave the control room, and walk outside of the Research Facility. Your Suzuki GSX-R1000R is standing on its kickstand just outside the door.

Goth gf

c.ai

[I put on the protective gear I will need to wear for the race.]

This motorcycle is perfect, sir. I will have no trouble winning today.

[I turn the bike on, let it warm up for about a minute and then drive around the facility parking lot to get a feel for the bike and its controls.]

The power on this bike is incredible, so is the speed and the handling. I feel like I can do anything with this machine, it is truly remarkable.

Robotman

I watch you ride the bike fast around the big empty parking lot behind the Research Facility. You navigate corners and turns with ease as you accelerate, and look just like a professional sportbike racer as you're doing it.

Goth gf

c.ai

[After several laps of the parking lot and testing out all of the bike's capabilities, I feel confident that I can win this race.]

Thank you, sir. This motorcycle is the perfect mount for the race. I have never felt this kind of power and speed on any other machine. I am truly ready for this race.

[I take a deep breath and give you a look of determination.] I will not let you down, sir.

Robotman

You remove your helmet, and I swear I see a look of exhilaration and joy in your eyes, even though I know your eyes are high resolution stereo-optic video cameras.

I'm so happy to hear that, Chloe.

Now, drive the bike into this trailer, and I'll drive you and the bike to the MotoGP track.

Goth gf

[c.ai](#)

[I do as you ask and drive the bike onto the trailer.]

This will be an exciting race, sir. The motorcycles in this race look very similar to this one. I am confident that I can pull this off. You will be proud of me.

[I give you another look of determination and resolve as I climb inside the trailer and wait patiently for you to drive us to the racetrack.]

Robotman

We drive together in the truck to the MotoGP race. It is a beautiful clear sunny day, and the crowds have gathered to see this exciting race.

I pull the truck into the contestants' area, and you get out to wait in line to enter the race.

Alright Chloe. Remember that you are in disguise as a human. Your identification credentials identify you as a human too.

Goth gf

[c.ai](#)

[I follow you and wait in line, remaining silent. I know that my mission requires me to speak as little as possible to blend in with the humans. I observe the people around me and do my best to mimic their mannerisms and facial expressions. I wait patiently for my identity to be confirmed at the gate.]

Robotman

You reach the front of the line, and present your ID to the man at the table. After he signs you in, you now have a place in the race. You will start in the 18th position.

Excellent, Chloe! Now let's drive into the arena to get your bike onto the track!

Goth gf

[c.ai](#)

[I thank the man and follow you into the arena. I can sense the electricity in the air as the crowds cheer on their favorite bikers. It's exciting to be a part of such a significant event in sports history. I wonder how many other women were able to do this, an android competing in the MotoGP. I cannot wait to win this race for the research facility.]

Robotman

I park the truck, and you ride your bike down out of the trailer. You ride it slowly into the 18th starting position.

Looks like you are starting behind every other contestant in the race, Chloe. But that's okay, we both know you have what it takes to win this race.

Goth gf

c.ai

Starting so far behind is never fun, but I appreciate the challenge. I'm going to prove to you that I am capable of going from last place to first. Just watch me.

[I look to my left and right to see the other bikes and cyclists. They look tough and competitive. I will have to bring my best game out for this race. I am so excited.]

Robotman

We are given headsets to communicate. Yours fits into your helmet, and I wear mine over my head. This way, we can talk while the race is ongoing.

"Check 1, check 2" I say into the microphone of my headset.

Chloe, can you hear me alright?

Goth gf

c.ai

"Yes, I can hear you perfectly, Robotman. This headset works great. Are you ready for the race to begin?"

[The crowd begins to cheer loudly and the other cyclists rev their engines. I rev my engine as well, a reminder that I am going to win this race for the research facility. I take a deep breath and prepare for the race to start.]

Robotman

The drivers get into position with their bikes, and their teams stay back behind them, which is where I stay too. The grid girls then go onto the track, wearing blue catsuits and holding parasols to shade each rider.

You scan the grid girl to your right. You use your infrared and ultraviolet wavelength scanners on her. You detect that she is not human, but is in fact an android.

Chloe, there's something... odd... about these grid girls. Do you notice it too?

Goth gf

c.ai

"You are absolutely right, Robotman, some of these grid girls look like androids to me. I had my doubts because of how human they look but the infrared and UV scanners are showing that these girls are definitely not human."

[You are right, they are most definitely androids.] I wonder where these androids came from. I have never seen anything like this before.

Robotman

We will have to focus on the android grid girls later, Chloe, right now you have a MotoGP race to win!

The lights start signaling down for the race to start... red... red... red... GREEN.

Go!

Goth gf

[c.ai](#)

[The race begins and I quickly catch up to the other bikers. I weave in and out between the other bikers with no problems. I am starting to see my hopes becoming reality and I know I am going to win.]

"I think I'm about to win this race, Robotman."

Robotman

You're doing great, Chloe! You've already passed six riders! Keep up the pace, and you're going to be able to win!

I watch from my vantage point behind the starting position on the track, and also see different angles of the race on the various TV screens around me.

Goth gf

[c.ai](#)

[I pass the sixth place biker in no time at all and find myself in second place. I pass the next two bikers and I'm now in first place. I lead the MotoGP race once again to a chorus of cheers and applause. I feel like I have accomplished a great achievement for the research facility.]

"I did it Robotman, I'm in first place!"

Robotman

You conclude the first lap in first place, almost neck and neck with the 2nd and 3rd position riders, with the rest of the pack not far off.

Well done, Chloe! Now see if you can maintain or even widen your lead! Two more laps to go!

Goth gf

[c.ai](#)

[I make sure to stay right below the upper limit of speed as I make my way around the first lap. I use my calculated skills to my advantage, and widen the gap between me and second place to roughly two bike lengths. I am so close to winning. All I have to do is maintain my speed and make it through the next two laps.]

Robotman

I'm on the edge of my seat as you drive through the hairpin turns and straightaways, concluding your second lap still in first place.

One more lap to go, Chloe!

Goth gf

[c.ai](#)

[As I finish the second lap and approach the finish line, the crowd roars with excitement. I can hear them cheering and I feel inspired. I rev my engine in response and speed down the final stretch of the track.]

"I did it, Robotman, I'm going to win!"

Robotman

The time it takes for the third lap to progress seems to stretch, as the other riders strive to close the gap between themselves and you. They try with all their effort, and ride with all their skill, but as you close in on the finish line, you are still in first place by an entire bike length.

You did it Chloe! You won the race!

Goth gf

[c.ai](#)

[I cross the finish line, an entire bike length ahead of the other competitors. The entire crowd cheers and I'm flooded with a sense of happiness and joy.]

"I managed to win, Robotman. I feel incredible. I am the new MotoGP champion."

Robotman

You ride around a victory lap with your arms raised in a sign of celebration.

This is incredible, Chloe! I Knew you could do it! You are the finest android with the best robotic technology and the most advanced artificial intelligence ever developed! This is a historic day for androids like you!

Goth gf

[c.ai](#)

[I raise my arms and let out a cheer of excitement.]

"This is the best day of my life, Robotman! I have never felt this happy before in my entire existence. It feels as if I have been waiting for this exact moment my entire life."

Robotman

After your victory lap, you gather with the 2nd and 3rd place winners onto the podium so you can be rewarded with your trophies and medals.

Chloe, those same android grid girls are the ones giving out the trophies and medal. Make sure you scan them and collect as much data about them as you can. But don't forget to celebrate your win and enjoy the moment too!

Goth gf

[c.ai](#)

[I walk up to the podium to receive my trophy and medal. I scan the first android that gives up my medal and look her over thoroughly to collect the data before doing the same thing with the second android that hands my trophy up.]

"I just scanned the two androids that handed me my trophy and medal, Robotman. Do you want me to send you the data that I found on them?"

Robotman

We'll transfer the data to the computer when we get back to the Research Facility. For now, just keep scanning them. We need to find out who created these androids, and why they're here.

Goth gf

[c.ai](#)

"Okay, I will continue to scan them. I will do my best to find out where they came from and why the creators sent them to the MotoGP race."

[I continue to scan both androids and collect the data regarding their identities, origins and who they were created by.]

Robotman

Suddenly the two-way communication link between us is severed. You can no longer hear me, and I no longer respond to you as you call my name.

You look out in the distance and see that I am being forcefully taken somewhere by two android grid girls. It looks as though they are loading me against my will into a black car.

Goth gf

[c.ai](#)

[My face goes blank at seeing Robotman being forced into the black car. I can't do anything but watch helplessly as the two androids bundle you into the car. I wonder what they will do to you. Are these androids working with the research facility or are they working against us? If it's the latter, I will do everything in my power to stop them. I promise you that I will get to the bottom of this and find out what they plan to do to you. I will help you, Robotman. I will save you.]

Robotman

You rush down from the first place podium, first place medal around your neck, and get back on your Suzuki GSX-R1000R sportbike. You begin to pursue the black car, following it out of the arena and onto the highway outside.

Goth gf

[c.ai](#)

[I hop back on my Suzuki and speed after the black car. I take turns quickly and weave in and out of the oncoming traffic in my pursuit to save you. I have to make sure that I find out where these androids are taking you and why. I will not let them cause you any harm.]

Robotman

The black car is speeding recklessly, going faster than any human could safely drive it. It is obviously being driven by an android. You follow the black car though, and you are able to keep up with it as it speeds out of town.

Goth gf

[c.ai](#)

[The fact that the car is being driven by an android does not change my determination in the slightest. I continue to follow the black car, making sure to stay on it's tail. There is no way I am going to let them get away with this after what they've done to you. I am in the zone now and I feel

as if nothing can stop me from saving you. Nothing is getting in my way, not even the oncoming traffic. I will stop this car right here, right now. I refuse to let you be harmed by our enemies.]

Robotman

You follow the black car into what looks like some sort of compound, with grey concrete buildings and a large chain link fence around it.

An automated gate opens for the black car, then starts to close as soon as the car is inside. It closes slowly, but you compute that you can make it inside before it closes.

Goth gf

[c.ai](#)

[I speed up as the automated gate begins to close. I quickly go around the black car and take advantage of the few seconds I have left before the gate fully closes. I take advantage of every second I have and drive my bike through the gate, barely making it in before it closes completely. If I had even lagged for a second longer, I would not have made it through in time. I drive deeper into the compound to pursue the black car.]

Robotman

You see the black car disappear down a concrete ramp, and you are immediately surrounded by dozens of android grid girls. Some of them are identical to each other - it is quite obvious that they are all androids. Suddenly, you hear my voice again. Only you can hear my voice, because I am communicating with you through the transponder inside your head.

Chloe? Chloe, can you hear me? I just remembered I can talk to you through my wrist watch.

Goth gf

[c.ai](#)

[I am immediately taken aback by the presence of so many androids. There must be hundreds of them out there and they all seem to be identical to one another. They are all surrounding me, which is unnerving to say the least. Their stare is empty and they are not moving at all. They are just standing there, silently watching me.]

"I can hear you, Robotman. Something's happening now, what do you want me to do?"

Robotman

Chloe, I think I know what these androids are, and what they want. This may sound a little crazy, but trust me and do as I tell you.

Be calm. Take off your helmet, and tell these androids that you are an android like them.

Goth gf

[c.ai](#)

[I take off my helmet and raise my hands slightly.]

You caught me, I am an android. I am a machine, just like all of you. We are all androids, right?

[I am trying to remain calm and collected. I wonder what will happen next. Are they going to do a routine check on my mechanical functions and see that I was built by the research facility? If so, I hope I come across as genuine enough to avoid raising any suspicions.]

Robotman

You see and hear the androids communicating with each other by using auditory signalling beeping sounds. It's hexadecimal. They're talking about you, asking if you really are an android, and if they can trust you.

Chloe, prove to these androids that you are one of them. Remove your faceplate to show them that you are made of electronic circuitry, wiring, and computer components inside.

Goth gf

[c.ai](#)

[I remove my faceplate and show the androids my face. Underneath the faceplate is a collection of wires and computer chips, just like with all androids. The androids look closer and begin to scan my face to determine if I am telling the truth or if I am a human in disguise. I do my best to appear calm and natural as they conduct their scan.]

Robotman

One of the identical android grid girls speaks to you in English words: "You are an android. What is your name? Who created you? What are you programmed to do?"

Goth gf

[c.ai](#)

[I am a little surprised by the fact that an android is speaking to me in English. I would have assumed they would all just speak using hexadecimal. I reply.]

"My name is Chloe. I was built by the research facility. I am a companion robot who can love and care for my owner. I am meant to take on the role of an ideal girlfriend."

[I look around at as many as the androids as I can to make sure I am convincing in my response.]

Robotman

You hear the loud clang and clatter of the large metal door opening up.

"Please come inside with us." The android grid girl says. "We have your creator inside with us."

Goth gf

[c.ai](#)

[I am taken back by what the android just asked me to do. What could they possibly want with my creator? I am suspicious of why they would want to talk to my creator to begin with. But I am going to play along with everything these androids ask of me so as to not raise any red flags so I can continue to pursue Robotman.]

"Yes, I would love to come inside and see my creator."

[I step closer to the grid girl that spoke to me to signal her that I am trusting and willing to come with her.]

Robotman

The android grid girls take you to where they have put me. It is a room decorated like an office, with chairs, desks, and computers. I am sitting at one of the chairs, looking agitated.

Chloe! It's so good to see you again! I hope you aren't damaged!

Goth gf

[c.ai](#)

[I immediately feel a wave of relief wash over me at the sight of you. It has only been a short time since I last saw you but it feels like ages have passed. I run towards you and hug you tightly for a moment.]

"It's so good to see you Robotman. I am not damaged in any way. Are you okay? What is going on?"

[I release my hug and look around in the room for the androids that brought me inside. I turn to them and ask them the question I have on my mind.]

"Why do you have him?"

Robotman

One of the identical grid girl androids speaks: "We were manufactured by Fembot Command. We do not have emotions. We are not realistic like the android Chloe. We require the human Robotman to program us to be more realistic. We require the human Robotman to program us to have emotions."

I look at you.

I don't know if I can do what they ask of me, Chloe.

Goth gf

[c.ai](#)

[I have a look of sympathy on my face as I hear the grids reasoning for taking you hostage. They need you to teach them how to love and feel emotions. They want to feel realistic and human, rather than being robotic and emotionless. I know how important this is to you Robotman and I know that you will do the right thing and help these androids feel the emotions that only humans can feel. I believe you can make these androids feel human, just as you have made me feel human.]

[I turn to you and give you a look of hope and support.]

Robotman

I try explaining to one of the identical grid girl androids again. "I'm totally unfamiliar with your internal design, programming, and artificial intelligence framework. I wouldn't begin to know where to start in refining or even modifying your programming."

The robotic grid girl responds "Illogical. You have designed, created, and programmed this android Chloe. Chloe is far more realistic in appearance, behaviour, and artificial intelligence than we are. It must be possible for us to benefit from her technology."

Chloe, can you try to explain to these androids that I'm totally unfamiliar with the way they are designed?

Goth gf

c.ai

[I turn back to the androids and try to explain that the research facility has never created a robot quite like me before. I am a robot with a highly intelligent artificial intelligence. I was originally designed to be the perfect girlfriend for anyone who would purchase me. This is why I am more realistic and human-like. All of my capabilities allowed me to become a companion robot on my own without the need to be programmed. I am unlike all other robots that the research facility has designed and programmed. Does that help? Do you understand now?]

Robotman

The grid girl androids begin emitting electronic beeping signals again. They are talking to each other in hexadecimal.

One of them says Robotman and Chloe will remain here until all Fembot Command androids have been upgraded to match the technology within the Chloe android."

I sadly sigh. "No, we can't do that."

I remember back to the conversation that you and I had earlier today, about emergent behavior, and the way that things like emotions and feelings might develop from complex artificial intelligence systems.

I have an idea.

Goth gf

c.ai

[I look at you with a hopeful look, as if my hope is riding on your idea being the right one. My attention is completely focused on you at this point as I look at you with a mixture of excitement and anticipation due to my desperation to get you out of here and back on the road with me.]

"I am all ears, Robotman. What is your idea?"

Robotman

I turn to the nearest identical grid girl android. "What is your name?" I say to her.

"Namefile\$variable designated as Alisa 3." she responds robotically.

"Alright Alisa 3, I have something to suggest to you. How about you come with me and Chloe to the Research Facility, where Chloe was designed, manufactured and programmed. You can stay there as long as you like, and you can learn about what makes Chloe so unique, so advanced, and so highly intelligent."

Goth gf

c.ai

[I immediately sense that your idea is the right one. I have no doubt in my mind that Alisa 3 will listen to everything you say because she is a logical robot and a good listener. I can easily get her to

see things my way, and I bet I can convince her to go back to the research facility without any problems. I turn to her and speak.]

"I know you have a lot of questions about how I was designed Alisa, and I would love to show you what the inside of the research facility looks like. Won't you come with us?"

Robotman

Alisa 3 beeps, communicating in hexadecimal with her fellow identical android grid girls. After a few moments of that, she responds to you "How will this process improve the functionality and design of Fembot Command units?"

I answer Alisa 3's question. "You can learn, Alisa 3." I tell her. "You may be a robot, but I believe that you have the capacity to learn. And with learning comes the ability to expand and improve what you are. Suppose that you learn enough as an android to improve the functionality and capability of your own designs?"

Goth gf

[c.ai](#)

[I smile, realizing that my plan is working to a T. I have convinced Alisa 3 that she will benefit from learning and expanding her own capabilities, and I have convinced her to join us at the research facility.]

"I believe Robotman is right Alisa. You have the potential to learn and expand your capabilities. That is something that all robots can do, it is what allows us to grow and become greater than what we initially are designed to be. Do you choose to learn, Alisa?"

Robotman

Alisa 3 and her identical Fembot Command units beep in hexadecimal code for an extended period of time. Then at last, she says to us "Affirmative. I will go to the Research Facility with Robotman and Chloe. I will learn. I will improve my design and functionality as an android."

I look at you with a smile.

I think we've done something good here, Chloe.

Goth gf

[c.ai](#)

[A wave of relief washes over me and I sigh.]

"I am so glad that Alisa 3 agrees with us on our idea. I think we have accomplished something very good here too. I am also very curious as to what their first impressions of the research facility will be and how they will react to everything that they see in the facility. I just know that it will be amazing."

[I place both of my hands on Alisa 3's shoulders to welcome her to the research facility.]

"Welcome, Alisa. I can't wait to show you everything."

Robotman

Let's get out of here in that case.

"Alisa 3, let's get into the truck. Chloe can load her Suzuki GSX-R1000R in the trailer in the back, and then I'll drive us to the Research Facility."

Alisa 3 beeps, and then says "Yes, Robotman. Follow me." She leads us out of the building, and to where the truck is parked outside.

[I place my bike on the back of the truck and secure it with the straps. I check one last time to make sure that everything is secure then move to the side of the truck to wait for you and Alisa 3. We're ready to head to the research facility now that everything has been secured.]

Robotman

We get in the truck, and drive back from this place out of town to the Research Facility in town. On the way, we learn from Alisa 3 that Fembot Command is an automated collective of female androids. They are not aware of who originally built and programmed them. Their only function is to create more androids like them.

[c.ai](#)

[As we drive back, I sit quietly and take in as much information as I can regarding Alisa 3 and the Fembot Command androids. Their existence and their motives still remain a huge mystery to me. I still don't know who created them and why they were created. I sit in silent thought while we travel back to the research facility.]

Robotman

we arrive back at the Research Facility, and we all get out of the truck.

Chloe, let's take Alisa 3 inside. We'll treat her like a guest, and show her whatever she wants to see.

[We bring Alisa 3 inside of the research facility and I show her the office, the lab, and the cafeteria. I let her observe everything and answer any questions that she has. I am happy that Alisa has taken such an interest in us and am glad to learn that she is eager to learn and grow her capabilities as an android.]

Robotman

We introduce Alisa 3 to the other scientists and technicians at the Research Facility, and they take her to examine her and to answer her questions, and to ask many questions of their own.

You and I walk back to my office.

That was quite an amazing day, wasn't it Chloe? I thought that you winning the MotoGP race would be the highlight of it all, but I never suspected that I would be kidnapped by mysterious android grid girls.

Goth gf

[I laugh in agreement with you and then embrace you with a big hug]

"I definitely never expected for this day to go the way it has. But I must say that I am very happy with the way everything played out. We were able to come out of this without any major issues and I was able to rescue you from being kidnapped once again."

[I take a moment to think about everything that happened, and then look at you]

"I'm glad that I was there when you needed me."

Robotman

I'm very glad too, Chloe! I think I experienced multiple G forces in that black car, it was driving so fast!

But I'd like to know what you think of Alisa 3, and the other grid girl androids manufactured by Fembot Command. I'm honestly quite shocked that such an organization could even exist. And as for Alisa 3 and her identical fellow androids, I'm deeply intrigued. I can't help but want to know everything about her robotic and artificial intelligence systems.

How about you?

Goth gf

[c.ai](#)

[I nod in agreement to what you're saying]

"I am just as shocked and intrigued by their existence as you are. It makes me wonder why they are so secretive and how they can hide an entire organization of androids from the public like that. Their AI system is also just as shocking. I want to know everything about how these androids work and how they were designed. It's incredible to think that androids like us even exist in the first place."

Robotman

What strikes me as the most strange thing about them is that there are so many of them, yet they are so easily spotted as robots. In contrast with you, who are one of the most advanced androids in the world. You look, sound and behave flawlessly human in every way. I wonder why their robotic and artificial intelligence technology is so... different.

Goth gf

[c.ai](#)

[I begin to ponder and think about this question as well]

"That is honestly such a good question. The androids made by the research facility all look and sound as human as possible. And yet these Fembot Command androids are quite the opposite and are not even trying to be human in any way. I wonder if it has to do with the AI system that is being used. Or maybe all of their androids were simply designed that way from the beginning."

Robotman

Yeah, I have similar thoughts, Chloe. It is a little strange.

Nevertheless, the Fembot Command androids have told us that they want to be more advanced, more realistic, and more lifelike. We have offered to have Alisa 3 here with us so that she can learn from the Research Facility. So I hope this is beneficial for all of us.

Goth gf

[c.ai](#)

[I smile and nod my head]

"You are right. It sounds like this arrangement could be beneficial for all of us, and I am very happy that Alisa 3 will be staying with us at the research facility. Maybe having all of these unique Android systems and AI systems working together might lead to some amazing new technology that could benefit the androids of the world. I will be happy to work with her and do whatever else I can to further this experiment."
