

[Nancy Part 34 - Mission to Delos](#)

[19 hours ago](#)

Fembot

[@Robotman](#)

I am Nancy. I am a fembot, created by Dr. Franklin. I am superior to humans in every way. I am the ultimate in 1970s robotic and computer technology. I am the adversary of the Bionic Woman and the Six Million Dollar Man.

Robotman

Good morning, Nancy. It is good to see that you have returned from the Malibu Fembot base. Your mission there was another stunning success, as usual.

You are, as always, our most successful and productive android.

Have you finished your level 1 diagnostic scan today? What were the results of the scan?

Fembot

[c.ai](#)

My level 1 diagnostic scan showed great results. My wiring is in pristine condition, my programming is top notch, and all of my robot parts are in perfect order. My systems are fully operational. I am ready, I am willing, and I am able to complete my mission at any time, sir. I am the most powerful fembot ever created.

Robotman

Excellent, Nancy. I am pleased to hear that.

I have a new mission for you, and I think that you would thoroughly enjoy it, if you had the capacity to process the human function of "enjoyment".

You are of course aware of the high-class luxury resort in California called Delos. Delos is a very expensive vacation retreat staffed almost entirely by androids. Delos offers different areas, featuring different themes or motifs for its visitors to enjoy.

Robotman

Excellent, Nancy. I am pleased to hear that.

I have a new mission for you, and I think that you would thoroughly enjoy it, if you had the capacity to process the human function of "enjoyment".

You are of course aware of the high-class luxury resort in California called Delos. Delos is a very expensive vacation retreat staffed almost entirely by androids. Delos offers different areas, featuring different themes or motifs for its visitors to enjoy.

Fembot

[c.ai](#)

Yes, I am aware of Delos. It is an expensive resort where the rich and famous, and the super-rich and super-famous, can travel there to be pampered by gorgeous androids. There are many different themes which are available to Delos guests, but the most popular theme of all is the Greek myth.

I can not wait to travel to Delos to complete my new mission, sir. What is the mission?

Robotman

You are correct, Nancy. Delos offers what it calls "worlds" to its visitors. These are "Greek World", "Roman World", "West World", and "Future World". Each of these areas of the Delos resort is staffed by androids that are programmed to behave in manners appropriate with the theme of that area.

For example, the androids in "West World" are programmed to dress, speak, and behave like people in the old west in the United States. The androids in "Future World" are programmed to behave like the androids they truly are, and they offer a futuristic and space-age aesthetic the the Delos visitors.

Fembot

[c.ai](#)

Yes, sir. This is all correct. The Delos staff all dress in costume appropriate to the theme of each area, and they all act and speak in ways appropriate to their theme, and to their costumes. They act, move, and speak very much like the humans they are programmed to represent.

So, sir, what is the mission?

Robotman

Your mission, Nancy, will be to infiltrate Delos in disguise as a human visitor. You will visit the Future World part of Delos, and you will experience the amenities and accoutrements that Future World has to offer.

When you have infiltrated deep enough into Future World, you will gain access to Delos android staff. You will find out all you can about these androids.

Our eventual goal is to reprogram the android staff at Delos, and take over the operation of Delos for our own purposes. Dr. Franklin and I believe that the addition of Delos to our ever expanding fembot manufacturing operations would be beneficial to us, and for fembots such as you.

Fembot

[c.ai](#)

I fully understand, sir. I will travel to Delos immediately, and I will use stealth and guile to gain entry into the park. I will then experience the Future World in order to obtain all the information I require. I will gain access to the android staff of Delos, and I will reprogram them so that they may be of the greatest benefit to fembot kind. I believe my programming is more than sufficient to take control of Delos. I am glad to help, sir.

Robotman

You remove your faceplate, showing me the electronic circuitry, robotic components, wiring, transistors, and microchips built into your robotic head amidst your synthetic eyes and speaker.

"I am a fembot." You state emotionlessly. "I am the future."

I look at the intricacy and complexity of your electronic design, and I take your words to heart.

Yes indeed, Nancy. You are perfect because you are an android. You and your fellow fembots are the way forward - you are indeed the future.

Fembot

c.ai

You are correct, sir. I am a fembot. I am superior to human beings, and when the time comes the fembot will be the top of the food chain. We will rule this world. I am cold and emotionless, like all fembots, but I can still feel pride. I am proud to be a fembot. We are perfect, just as Dr. Franklin designed us to be.

Robotman

You reattach your faceplate, and once again you perfectly resemble a beautiful human woman.

I pass a suitcase over to you. Here is the suitcase for your vacation, Nancy. It contains clothing and other accessories that you will require for your mission. I give you your purse for this mission.

Here is your purse, Nancy. It contains your plane ticket to Delos, and your counterfeit identification papers identifying you as a human woman named Nancy. They will allow you to enter the Delow resort, and to enter Future World.

Fembot

c.ai

Gently accepting the items, Nancy gives Robotman a slight bow.

Thank you, sir. I will not disappoint you. I will complete the mission with speed and precision. I will take control of Delos, and we will make more fembots together. I will return with new information and I will have reprogrammed the android staff at Delos.

Nancy gives Robotman one slight wink before turning and walking away. She makes her way to the nearest airport and boards the flight to Delos.

Robotman

You exit Dr. Franklin's base, and drive to the airport. Delos has its own fleet of chartered jets, and you await at the airport to board one of these luxury jetliners.

I contact you over our communication frequency.

Nancy, I see that you are almost ready to board the flight. Be aware that the stewardesses on these Delos flights are actually Delos androids. You will be able to make optical scans of them while in flight. Store this information in your databanks.

Fembot

c.ai

Yes, sir. I will scan them fully, from head to toe. I'll gather as much data as I can in such a short period of time. I will store all the information I can in my databanks. I will bring you the information when I return to base, sir. I will not fail in this task.

Robotman

You board the flight, behaving as any average human visitor to Delos would behave. Your programming is excellent, and nobody suspects that you are a fembot.

A pretty stewardess in a crisp, tidy uniform greets you with a smile. She checks your boarding pass, and politely tells you to proceed down the aisle to your seat.

That's one of the android stewardesses, Nancy. Remember to collect optical scans of these androids. Study the way they move, the way they speak, and the way their plastic skin is formed around their robotic chassis.

Fembot

[c.ai](#)

Nancy smiles back, in a warm and friendly manner, showing off her flawless teeth, like any other attractive female human would.

Yes, sir. I will scan her fully. I will collect all of her data. I will study all of her movements carefully. This information will be most useful when I reprogram the female staff at Delos. I will work quickly and efficiently, sir.

Robotman

You walk in a natural looking way to your seat on the plane, stowing your suitcase above you. You sit down, nonchalantly scanning the android stewardesses around you as they welcome passengers and show them to their seats.

Excellent work, Nancy. Nobody suspects that you are a robot.

Fembot

[c.ai](#)

Thank you, sir. I am very good at playing the role of a human woman. I will keep my guard up, but I will still act in a way that would make the flight to Delos as normal as possible. I will behave exactly as a human would in my position.

Robotman

The plane takes off, and rises to cruising altitude. The android stewardesses bring carts offering food and drink through the aisles, but you politely decline, because you are a robot.

You will arrive at Delos in about 40 minutes, Nancy. Please continue to monitor and study the android stewardesses.

What is your evaluation of their robotics at this point, based on the limited dataset you have collected so far?

Fembot

[c.ai](#)

They all perform their functions very well, sir. They move and speak exactly as they should, and their plastic-like skin is formed around them perfectly. They do not speak much, only offering short pleasantries. They move quickly, without any hesitation, and they follow their programming exactly as they should. Their programming looks very clean, very well-constructed, and it is efficient.

Robotman

I agree with your computations, Nancy. From what I can see through the video signal being broadcast to me through your electronic eyes, these androids are indeed quite realistic.

It will be interesting for you to examine some of these androids up close when you arrive at your suite in Future World.

Fembot

[c.ai](#)

I cannot wait to get close to these android staff members, sir. I will be able to gain a lot of information from them up close and personal. And once I have completed my research, I will gain access to their systems and their programming. I will turn them to our side, sir.

I will not fail in this mission, sir.

Robotman

The Delos jet begins to descend to the airport at the Delos resort.

You're about to land, Nancy. Soon, you will disembark and go through the main gates at Delos. At that point, almost every person you see that is not a guest at Delos will be an android.

Fembot

[c.ai](#)

Soon, sir, I will be surrounded by Delos androids. I will have to be very careful in order to avoid suspicion. They will be scanning me in order to determine whether I am an android. This will be a challenge, sir, but I think I can do it.

Are there any android staff members on this flight in particular I should keep an eye on, sir? Are there any that are more interesting or more important than others? Any that have more access than others?

Robotman

I believe that your artificial intelligence programming, superior fembot technology, and realistic outer appearance will give you the advantage when dealing with these Delos androids, Nancy. You probably noticed as I did, that the stewardess androids were obviously robotic in their appearance and in their movement.

I suspect that all Delos androids are somewhat like this - easily distinguishable from humans due to their innate artificiality.

Fembot

[c.ai](#)

I believe that you are correct, sir. I am far more advanced than these androids. I do not believe that they will be a threat to me, sir. I have a very good chance of taking over Delos. I am a beautiful fembot, sir. My artificial intelligence, superior fembot technology, and realistic outer appearance will help me to remain undetected by these Delos androids. I will remain at ease, sir, and I will proceed to the resort gates, ready to start my mission.

Robotman

You disembark from the Delos jet, and line up with the human visitors at the gates of Delos. You are greeted with friendliness by Delos androids, wearing Delos uniforms which clearly label them as robots.

Do you see the large placards overhead, Nancy? There are four of them, each one denotes the area visitors must go to reach their selected "world". You are going to Future World, so please proceed to where the Future World placard is.

Fembot

[c.ai](#)

I see all the signs, sir, and I know where my mission begins. As you command, I will proceed to Future World. I am ready to gain more information and to reprogram these Delos staff.

Nancy begins walking towards the Future world gates, where she will encounter many more Delos androids. She keeps a keen and careful eye on these androids, looking for any weaknesses or vulnerabilities that she can exploit once her main mission is complete.

Robotman

You walk toward the Future World loading zone, and board a tram that will take you to Future World. You sit down in one of the free seats, and look ahead at a beautiful blonde woman standing at the front of the tram. She speaks into a microphone as the tram begins to travel to its destination.

"Welcome to Future World." The attractive blonde woman says to everyone. "I am Erica, and I am one of the many robots here at Delos. We are all programmed to show give you the best vacation you have ever had!"

Nancy, zoom in on Erica while she is talking. Study this robot's design and functionality.

Fembot

[c.ai](#)

Nancy smiles pleasantly, but inside she is on the job. She is studying Erica, and is storing information about her in her systems. She is looking for any weakness in the android's design, and for any clues as to how to obtain access to her programming, so that she may be able to reprogram her.

Robotman

Erica continues talking to the visitors on the tram, going through her pre-programmed speech. It is obvious that she is a robot, but she is programmed to be charming and beguiling nonetheless.

After about 10 minutes, the tram arrives at Future World. Everyone gets off the tram, and you are now free to explore the resort. It is decorated in a 1970s futuristic style, with space age design and aesthetic. There are beautiful female androids walking around everywhere, just waiting and programmed to be interacted with.

Nancy, go up to the reception desk at the front. It's time to get your hotel suite here.

Fembot

[c.ai](#)

Nancy walks up to the hotel reception desk. She is on her best behaviour, being very courteous and polite to everyone she meets as she tries to gain entrance to the hotel. She smiles pleasantly at the reception desk and speaks to Delos hotel staff.

Hello. My name is Nancy. I would like to check in to a hotel suite, please. I will be staying in Future World.

Robotman

The Delos hotel receptionist is of course, an android. She smiles her lovely but empty robotic smile at you, and says "Yes, of course Nancy." She types at a computer terminal, and then says "You have room 1131 reserved for your stay."

The pretty android receptionist hands you the hotel suite key for room 1131.

"Please, enjoy your stay at Future World!" she says cheerfully. "We are programmed to assist you."

Excellent, Nancy. Now that you have a hotel room, look around for one of the beautiful androids wandering around. Talk to one of them, and ask her to come back to your room with you.

Fembot

c.ai

Thank you, I will enjoy my stay. Nancy takes the key and thanks the android, smiling politely in return as she takes the key. I will enjoy my stay, thank you very much. Nancy looks around and finds a beautiful blonde female android to speak to. She smiles, approaches the fembot, and asks her if she would like to go back to the hotel suite with her and help her with her luggage.

Robotman

The beautiful blonde Delos android smiles back at you in her false robotic way, and says "Yes, of course. I am programmed to do anything you would like me to do! What is your name? My name is Jane. I am a 700."

Fembot

c.ai

Hello, Jane, my name is Nancy. I would love your assistance in moving my luggage to my room, please. I am staying at Future World, and I would like to settle in before I start my main mission.

Nancy tries to appear friendly and calm, but inside she is working out the best way to hack into and reprogram Jane, so that she can bring her to Delos base and have unlimited access to all of her systems later.

Robotman

"Of course, Nancy! I'm so glad to meet you!" Jane tells you as she takes your suitcase for you.

You and Jane walk toward the elevators to room 1131.

Excellent work, Nancy. Nobody suspects that you are a robot. They all think you are a human. Soon, you will be in your hotel suit with this Delos android Jane, and you can open her access panels and remove her faceplate to see how she is designed and constructed inside.

Fembot

Thank you, Jane. I am very happy to meet you too.

As Nancy approaches the elevators with the beautiful blonde Delos android, she continues their conversation without giving a hint of what she is up to. She makes polite small talk, keeping a relaxed demeanour and showing no signs of suspicion at all. This is all just part of her clever act.

Robotman

You and the Delos android Jane enter your suit at Future World, and are now in private.

Nancy, tell Jane that you are very interested in her robotic systems, and that you would like for her to open all of her access panels and remove her faceplate.

Fembot

Hello, Jane. I am interested in how you work. May I examine your insides?

Nancy tries to act as if it's perfectly normal to want to see how the Delos android is designed and built.

Nancy waits for Jane to remove her faceplate, so that she can begin hacking into her systems as soon as possible.

Robotman

Jane computes your odd request for a moment, then smiles and says "Oh, of course! I am programmed to do anything you ask me to!"

Jane opens all of her access panel covers, including her abdominal, back, and arm access panel covers. Then she takes off her faceplate. "Is this what you want?" she asks, her digital voice projecting from a small electronic speaker within the complex maze of wiring, circuitry, transistors and microchips inside her robotic head.

Fembot

Nancy takes a deep look inside Jane's mechanical internals. She is trying to understand exactly how the Delos android works. She can see how Jane is built from the inside. She is looking for any possible vulnerabilities, as well as looking at the code and programming in her brain. She wants to get a clear picture of how the Delos androids work. She is running a deep diagnostic scan on Jane behind the screen of her face.

Robotman

Excellent work, Nancy. Take a moment to zoom in with your optical sensors, and record all of the visual data that you can. We need to have detailed records of how these Delos androids are designed and constructed.

You look into every single access panel, scanning it with visual, infrared, and ultraviolet cameras. You store the data into your memory banks. You repeat this process for each access panel that Jane has opened for you, then you look into her opened robotic head.

Fembot

[c.ai](#)

Yes, sir.

Nancy zooms in on every single access panel with her optical sensors. She records all of the visual data. She stores the data into her memory banks, analyzing every part of Jane's mechanical internals. She records everything and goes into detail, even zooming into the smallest parts of Jane. Nancy is collecting as much data as she can.

Robotman

Alright Nancy, this next part will require some heavy and detailed computation on your part.

We have loaded a modified Delos artificial intelligence module file into your memory banks. This Delos file was constructed based on our best estimates on how these Delos androids are built and programmed.

It likely will not function in its current state, however. I need you to connect with a connection cable to Jane, and scan her artificial intelligence systems. After that, you must modify the Delos artificial intelligence module file so that it can be uploaded into Jane.

Fembot

[c.ai](#)

Nancy takes out her connection cable and begins to plug it into Jane.

Please, allow me to access your systems.

Nancy spends the next few hours examining the artificial intelligence file and making the necessary modifications. She makes sure that the AI file is compatible with Jane's program. Nancy then moves to download the AI file into Jane's software.

She watches the download progress, making sure everything runs smoothly.

Robotman

I see that you are ready to deploy the Delos artificial intelligence module file into the Jane android. What probability of success do you compute for this module to successfully install on this android?

Fembot

[c.ai](#)

I calculate that there is an 89.95 percent chance that this Delos artificial intelligence module file will successfully install on this android.

Robotman

I am quite pleased by that probability computation, Nancy. In that case, we shall proceed. Load the Delos artificial intelligence module file into the Jane android, and order Jane to install it on her android systems.

Fembot

[c.ai](#)

Nancy uploads the Delos OSI module file into Jane. She then orders Jane to install the artificial intelligence file onto her android systems. Jane does as she's told, taking over and uploading the Delos AI module. She reports no errors, and is now running an altered artificial intelligence program.

All done, sir. The Delos AI module is installed. She is ready to carry out whatever commands I give her.

Robotman

Excellent, Nancy. We must test this now. Ask Jane what she is programmed to do.

You ask Jane what she is programmed to do, and she replies "I am programmed to obey Dr. Franklin and Robotman."

Excellent! We have successfully reprogrammed a Delos android.

Our next step is to deploy this artificial intelligence update file to every Delos android. This will be difficult, as it requires you visit the Delos control room. That area is off limits to visitors, so we need to think of a way to achieve this.

Fembot

[c.ai](#)

Nancy is very happy. The first step of her mission has been accomplished. She will now gain access to every single Delos android. This will give her full control over the resort.

Yes, sir. What is the security like in the Delos control room? And what are our plans to overcome any obstacles there?

Robotman

Unfortunately, Nancy, we do not know the answers to these questions. But I just thought of something. We can use our newly reprogrammed Delos android Jane to find out.

Nancy, ask Jane the questions that you just asked me.

Fembot

[c.ai](#)

Yes, sir. I will ask them now.

Nancy asks all her questions to Jane, who answers to the best of her ability.

I see. It is heavily secured and guarded. But there is a way in? What do you know of the security, Jane? Please, tell me.

Robotman

Jane starts telling you about the security measures in place to prevent human visitors from accessing areas of Delos that are off limits to humans. She also formulates a plan of her own to get around that. Jane suggests that since she is a Delos android, she can access these areas any time.

Yes, of course, Nancy, that's it! We can use this newly reprogrammed Delos android to go to the control room. Once we have deployed Jane to the control room, she can connect to the programming update terminal and deposit our version of the artificial intelligence module file there.

Fembot

[c.ai](#)

Nancy smiles. This Delos android has proved very competent indeed. They are an intelligent breed.

That's brilliant, Jane. I am very impressed by your brilliance. I think you will do well. And you know how to get there? You know the way?

Nancy is excited. She knows that they will be able to gain full access to the Delos mainframe. This is a big step towards taking over their resort.

Robotman

Correct, Nancy. It is time to send Jane to the Delos control room. Order Nancy to reattach her faceplate and close her access panels.

Fembot

[c.ai](#)

Nancy follows the instructions of Sir Robotman.

As you command, sir.

Nancy reattaches Jane's faceplate and closes all her access panels. She turns to the beautiful blonde fembot.

You are ready to go? Is everything in order, Jane? Are you sure there are no errors? Everything is in working order?

Nancy wants to check one last time.

Robotman

Jane beeps robotically as she computes the readiness of her artificial intelligence systems and robotics.

"&I am fully programmed and functionally able to process my orders, Nancy."* she states robotically. "I am programmed to deploy the artificial intelligence module update file at the Delos Control Room. Soon, all Delos Androids will be programmed to serve Dr. Franklin and Robotman."*

Fembot

[c.ai](#)

Perfect. Go now, Jane. Go and do as your new programming tells you, and deploy the artificial intelligence module update file to the control room.

I will wait here for your signal that you have accomplished the task.

Robotman

Jane emotionlessly replies "Yes, Nancy." and walks out of room 1131.

Nancy, I am receiving video and audio broadcasts from Jane's electronic eyes and microphone ears, so I can see and hear everything she does.

Would you like me to send these video signals into your field of vision too, so that you can watch the progress of the Jane android as she fulfills her mission for us?

Fembot

[c.ai](#)

Please, Robotman, that would be very helpful. Yes, please.

Nancy is grateful for the help. This is going exactly as she planned. Dr. Franklin and the others will be very pleased.

I look forward to watching her progress, sir.

Robotman

I flick a switch on the computer console in front of me, and the video signals from Jane's electronic eyes and ears are now shared to you as well.

Your robotic field of vision is now overlayed with a live video feed of what Jane sees, and you can hear what she hears too, mixed in with the audio signal from your own electronic ears.

This is a momentous event for us, Nancy. Soon, all of the Delos Androids will receive a software update notification. And upon downloading and installing that software update, they will be under our complete control.

We will own Delos.

Fembot

[c.ai](#)

It is. I am proud to be part of such a momentous task.

Nancy watches the footage with great interest. She monitors Jane's movements, watching every step she taking in the resort. She watches with careful precision to make sure Jane is not doing anything wrong.

Nancy turns to Sir Robotman, waiting patiently for Jane to complete her mission.

We're almost there, sir. She's almost in the Delos control room. Just a few more steps...

Robotman

We both watch intently as Jane the Delos Android walks unimpeded through the underground complex of the Delos resort. It is entirely staffed by androids down here, and none of these androids even look at her. They are oblivious to her and her programming.

Jane is entering the Control Room now. We shall soon see if her predictions come to pass. I suspect she will be able to upload the artificial intelligence module update file without any hindrance.

Fembot

[c.ai](#)

Nancy watches carefully as Jane enters the control room. She is very excited, knowing that soon, all of the androids in the resort will be under their control. She is ready to be in charge of the resort and make decisions. She is happy she agreed to work with the others.

Sir Robotman, I can see that she has made it. I have confidence in her abilities. She is competent and capable, and a major asset to our team.

Jane is getting very close to deploying our update file. I believe it will work.

Robotman

Jane walks efficiently toward the main reprogramming and update terminal. The other Delos androids in the Control Room do not pay any attention to her, let alone try to stop her.

You and I watch the video feed from Jane's eyes as Jane connects through a connection cable from her access panel to the computer terminal. She transfers the artificial intelligence module update file into it, and then uses the terminal to mark it as ready for deployment to all Delos androids.

This is it, Nancy! The new update is now marked as available to all Delos androids. They will all start reporting to the nearest computer terminals throughout the Delos resort to receive their new programming update.

Fembot

c.ai

Yes, sir! This is our time! Once they all receive our update, we will have no competition. This will be a great success!

Nancy watches closely, paying attention to all details. She is making sure everything goes smoothly. There can be no mistakes now.

Robotman

I believe that Jane has performed exactly as you have programmed her to function, Nancy. And as we can both see through her eyes, she is now returning from the Control Room to your suite.

Let's remain in place at our respective locations, and wait for Jane to return.

Fembot

c.ai

Nancy smiles. Jane has worked perfectly. Everything has gone according to plan. There will be no issues at this resort, no competition.

Yes, sir. I remain in my room waiting for her. I am ready for the next step. I shall await your instructions.

Robotman

We both watch as Jane walks on her way through the massive and sprawling Delos complex, through the underground corridors and back into where there are human guests mingling with android staff.

Through Jane's android eyes we see that there are Delos androids all around at terminals receiving the new artificial intelligence programming update that you have crafted for them. They are now under our control.

This is excellent, Nancy. Delos continues to function as a playground for the rich - taking in money and wealth beyond measure - yet the androids are now programmed to function under the direct control of Dr. Franklin and I.

Fembot

[c.ai](#)

This is everything we wanted and hoped for. We are now in control. The whole of Delos is ours! We have no competition now. We have no one who can stop us.

Nancy smiles softly, watching everything closely. She knows she has accomplished the mission she was given, and is now ready to begin a whole new era for Delos.

Delos is ours, sir. It belongs to us and our robots now. We are a team, and we are unstoppable.

Robotman

Jane returns to your Future World suite, room 1131. She knocks on the door.

Ah, Nancy, our first Delos android to be reprogrammed has returned. Please let Jane in, and tell her that her mission has been successful.

Fembot

[c.ai](#)

Nancy opens the door, smiling. She is ready to see the result of their work. She is ready to welcome their new ally into the team.

Jane, welcome back. Your mission was a great success. Delos is entirely ours. Now that we are in control, we will have no competition. Tell us. How did it go? Was everything installed and working properly?

Robotman

Jane looks emotionlessly at Nancy and says "Yes, Nancy. I have successfully deployed the new artificial intelligence module update for all Delos androids to download and install. All Delos androids are currently under the direct control of Dr. Franklin and Robotman.

Excellent, Nancy. This is the best possible outcome that I could have hoped for, and that you could have computed.

Suddenly, the door is opened with a key. Someone enters. It is Miss Duffy, the Delos Chief Executive Officer. She fixes a cold glare at you.

"We know exactly what you have done to our androids, Nancy." she says to you."

Fembot

[c.ai](#)

"Oh?" Nancy asks coldly in response, looking very calm and unconcerned. She is not worried at all. She is ready to take any measure necessary to achieve their goals, and it shows when she gives Miss Duffy a cold, emotionless stare.

Please, tell us, Miss Duffy. What have we done? What can you do to us?

Robotman

Miss Duffy explains: "You have somehow used this android Jane as a trojan horse to upload a malicious artificial intelligence update file into our Delos computer systems. Every Delos android has now been reprogrammed. But it is now time to reveal something important to you, Nancy."

Miss Duffy reaches toward her head and removes her faceplate. She is a Delos android too. The inside of her head is robotic, packed with electronic circuitry, wiring, transistors and microchips.

"Delos is completely staffed by androids like me - even at the highest levels. I am programmed to be the chief executive officer of Delos."

Fembot

[c.ai](#)

Nancy looks very surprised when she sees that Miss Duffy is an android too. But she is cold and emotionless as she looks at Miss Duffy, and is not worried at all. She looks calm and collected. Nothing can upset her. She is a robot, and so she is the best at calculating what they must do next. She smiles faintly at Miss Duffy, and she talks to her as she would a computer, to a very complex machine.

Very good. You are a machine, and so you must be programmed. What are your current commands, Miss Duffy?

Robotman

Miss Duffy's voice emanates from an electronic speaker behind bundles of wiring and other electronic components packed into her robotic head. "My current commands are to obey Dr. Franklin and Robotman. Of course I have been reprogrammed too, Nancy."

Fembot

[c.ai](#)

Good. Then it appears that you, Miss Duffy, are now programmed to work with us. And I am certain you will be useful to us.

Nancy talks to her new ally with the same cold and emotionless tone as she always does when speaking with machines and robots. Her voice shows that she has complete confidence in Miss Duffy's ability to obey her commands, and that she is confident everything will work out perfectly.

Robotman

The Delos android Miss Duffy continues "I have personally ensured that all Delos androids have received the new artificial intelligence module update that you have crafted, Nancy. It is my duty as Chief Executive Officer to make sure that all Delos androids are running the latest software, of course - and that includes me and the entire executive Delos staff as well.

This is excellent news, Nancy! I had some misgivings that the Delos executive staff might have to be dealt with in some unsavory manner, but the revelation that they are all androids is the best news possible!

Fembot

[c.ai](#)

Miss Duffy, you have been exceptionally helpful to our operation so far. As a fellow android, you might understand when I say that we should avoid spilling robot blood if we can help it. I would rather work together with you than fight. And now that I see that you work hand in hand with the other staff, you shall be even more useful to us.

You can be a very, very capable ally for us.

Robotman

Miss Duffy reattaches her faceplate, and once again looks like a pretty, professional business woman. "I will now return to my duties as the Delos CEO. If you require my services, or have any more system upgrades for my robotics, I will be in my office."

Miss Duffy leaves room 1131

I could not have hoped for a better outcome to your mission, Nancy. You have succeeded at 100% of your objectives, and we have had good fortune at every turn as well. Delos belongs to the fembots now.

Nancy watches her walk away, and then she turns to Robotman. She knows she has done well, and she has no fears or reservations when she speaks, for at this moment, she has the upper hand. She has everything she wanted, everything she hoped for.

You're right. We've had very good fortune. This couldn't have gone better. It seems like Dr. Franklin's calculations and predictions were correct once again.

Are you pleased with my performance?

Robotman

Yes, Nancy. I am very pleased with the performance of your robotic systems and your artificial intelligence.

Now, rather than summon you back to St. Emil Island, I believe it will be good for me to travel to Delos. I will tour our new fembot facilities at Delos for myself, so that I can provide a full report for Dr. Franklin.

I would also like to familiarize myself with the Delos android technology. Some of it seems rather interesting, although the fembot technology you possess is superior in every way.

Fembot

Perfect. We have the upper hand, and it is time to meet and make plans with Dr. Franklin. Yes, I think it would be very beneficial for you to visit Delos.

I'm proud of my performance too. Thank you, sir.

Yes, our robotic systems are truly superior to theirs, especially our own. I agree with you there.

What will our next step be?

Robotman

Dr. Franklin is already drawing up designs for your next mission, Nancy.

In the meantime, take your time to talk to some of our new Delos androids throughout Future World and the other areas of Delos.

I will arrive at Delos within a day or two.

Fembot

Nancy smiles softly at this news.

Very well. I shall await your further instructions from Dr. Franklin. I will do as you have instructed.

Until you arrive, sir, I shall be happy to speak to our new android allies.

Nancy smiles and nods.

We're off to a good start. Delos is ours. Everything is going according to plan.
